With more than 25 years of experience, America's Best Mechanical & Electrical Contracting Services is a full mechanical & electrical service provider. We take pride in offering consistent, reliable delivery of unparalleled service as well as offering emergency service 24 hours a day, seven days a week.

Our Services:

Heating & Air Conditioning Maintenance, Repair & Replacement
Electrical Maintenance & Repair
Design / Build for Electrical & HVAC
Code Violations Corrected
Electrical Safety Inspections
Thermal Imaging
Power Quality Recording
Predictive & Preventive Maintenance
Certified Energy Audits
Spray Foam Insulation & Spray Foam Roofing
Air Sealing
Solar Hot Water
Solar PV System Design & Installation

Angie's list.

CERTIFIED
PROFESSIONAL

Energy Audit / Assessments

When a home energy assessment, also known as a home energy audit, is conducted on your home, America's Best Mechanical & Electrical professionals assess the property to determine how energy-efficient your structure is overall. Our professionals are skilled at finding weak spots and offering concrete ideas for improvement. Whether the evaluation helps you become aware of air leaks in windows or inadequate insulation in living areas, you will often discover problems you weren't aware of, which can improve your home's energy efficiency when corrected. During an energy audit, your home will be checked for cracks, leaks, and inadequate insulation with a blower door test and an infrared camera scan. Energy assessments also determine the efficiency of your home's heating and cooling systems and may show you ways to conserve hot water and electricity.

Thermal Imaging

Thermal Imaging is a non contact way of inspecting objects or surfaces. It can be used to evaluate heat loss through walls or ceilings, inspect your HVAC equipment, and perform safe non contact inspections of your electrical system. Thermal Imaging is a great way to see how you can reduce your heating and cooling cost for your home or business. Our qualified electricians will inspect your electrical system and make sure that it's in compliance with the most up-to-date electrical codes. We will make all the necessary corrections when needed.

Insulation, Spray Foam

Insulation maintains comfort in your house and it is primary defense against heat loss and heat gain through the house envelope. Using Spray Foam to cover up leaks can reduce heating and cooling usage dramatically. Spray Foam is by far the best solution for air sealing as well as filling in those unwanted cracks and leaks. AmericasBestComfort.com provides Energy Audits for your home and helps decide which areas in your home need to be filled in with Spray Foam. During our evaluations we use the Gaco WallFoam which is a high R-value polyurethane insulation. Gaco WallFoam gives you the ultimate in air seal technology, helping you save money on your energy bills. Also, our Gaco WallFoam prevents pests from entering into your home and prevents mold from growing between the walls. For energy efficiency, your home should be properly insulated from the roof down to its foundation.

Air Sealing

Air sealing is the process of measuring the total air loss of a home and using specialized equipment to locate, quantify and repair the leaks. Air leakage, or infiltration, occurs when outside air enters a house uncontrollably through cracks and openings. These leaks can make your home uncomfortable, waste energy, and cost you money. The basement and crawl space are the most important areas to seal. Air sealing is one of the most important ways to increase your home's energy efficiency

HVAC

We provide High Efficiency Heating and Air Conditioning products which help you save money as well as the environment. We have many different products and high quality brands to choose from and we can help you decide which unit will be best for your home. By choosing AmericasBestComfort for your new HVAC units, you can be assured that you are receiving the best prices for these products. We strive to constantly meet the diverse needs of each client and work hard to make every replacement to be a successful one.

Solar PV, Solar Heating and Cooling Technologies

America's Best Mechanical & Electrical Contracting Services specializes in the design and installation of solar photovoltaic and solar hot water and cooling systems. Photovoltaic (PV) systems convert sunlight directly to electricity. Solar PV systems are groupings or "Arrays" of modules wired together and to other electrical devices, to produce, isolate, convert and distribute electrical power. Solar heating and cooling technologies collect the thermal energy from the sun and use this heat to provide hot water, space heating, cooling, and pool heating for residential, commercial, and industrial applications. These technologies displace the need to use electricity or natural gas.
